WEEKLY CROP WEATHER SUMMARY

MARYLAND AGRICULTURAL STATISTICS SERVICE

Another dry week hit Maryland with most counties receiving no precipitation, allowing farmers 6.7 days suitable for field work. By mid-week, highs reached up to 100 degrees before cooling off to the low 80's by the weeks end. The extreme high temperatures in combination with arid conditions last week may hinder pollination and plant growth, particularly in row crops. **Corn** is curling and showing stress, especially in sandy soils and non-irrigated fields. Corn rated in good condition dropped 22 percent from the previous week. Yield could be negatively affected if rain doesn't arrive soon. Soybean growth has also been hindered by the lack of moisture. Soybeans rated in good condition fell by 24 percent from the previous week. The full week of field work allowed farmers to advance harvesting activities. **Winter wheat** is 89 percent harvested, 33 percent ahead of last year, and 24 percent ahead of the five year average. **Barley** harvest is virtually complete. Harvesting for vegetables such as **snap beans** and **sweet corn** are running 25 percent and 3 percent ahead of schedule respectively. **Topsoil moisture** rated in adequate condition continued to fall by 21 percent from the previous week. Topsoil moisture is currently rated 18 percent adequate, 46 percent short, and 36 percent very short. **Subsoil moisture** rated in adequate condition declined by 12 percent. Subsoil is rated 10 percent adequate, 57 percent short, and 33 percent very short.
